

NADIMULLAH KHAN

Senior Blockchain Engineer | Multi-Chain |
Smart Contract Systems | DeFi & Tokenomics

Senior blockchain engineer with 20+ years building scalable digital systems. Proven ability to design and deliver end-to-end multi-chain blockchain platforms across EVM (Ethereum, Polygon, Base, BNB Chain) and non-EVM networks (Solana, Sui). Deep expertise in smart contract design and tokenomics, DeFi protocol integration, secure off-chain orchestration, and production-grade blockchain infrastructure. Track record of delivering complex systems from architecture through to live deployment.

PROFESSIONAL EXPERIENCE

Founder / Lead Engineer – Graphixcon

2012 – Present

Blockchain Systems & Full-Stack Development | Self-Directed | Remote

- Architected and delivered multi-chain blockchain systems across EVM and non-EVM networks (Ethereum, Polygon, Base, BNB Chain, Solana, Sui)
- Designed and implemented smart contracts for tokenomics, presales, vesting schedules, and decentralized marketplaces
- Built AI-driven trading and monitoring bots with real-time on-chain criteria evaluation and automated execution
- Developed secure off-chain orchestration layers using Node.js, Redis, PostgreSQL, MongoDB, and MariaDB
- Designed event-driven architectures using webhooks between isolated services for security and horizontal scalability
- Implemented access control, key management, and RBAC systems for multi-sig wallet and protocol-level security
- Led full lifecycle delivery: system design, development, security audit preparation, and production deployment.

Early Career – Web Engineering

1999 – 2010

Various (Cyquester, Fortnet UK, Digital Scientists, Crowd Interactive, Talksho) | US / UK

- Full-stack web application development across HTML/CSS/JavaScript, WordPress, Joomla, and Ruby on Rails
- Delivered 15+ production projects including CMS platforms, social media interfaces, and e-commerce integrations
- Client portfolio spanned startups to enterprise: social media platforms, environmental

CORE SKILLS

Blockchain & Web3

Ethereum • Polygon • Base • BNB Chain • Solana (SPL, DEX Integrations) • Sui (Move Smart Contracts) • Smart Contracts & Tokenomics • Presale & Vesting Systems

Architecture

Multi-Chain Architecture • Cross-Chain & Multi-Network Design • On-Chain / Off-Chain Architecture • Event-Driven & Webhook Systems • Blockchain Security & Upgrade Patterns

Backend & Infrastructure

- Node.js / Express • Redis, PostgreSQL • MongoDB, MySQL • Distributed VPS Systems • Secure APIs & RBAC • Monitoring & Logging

Frontend (Supporting)

React / Next.js • Tailwind CSS • Shadcn/UI • GSAP • Three.js

DOMAINS

- Web3 & Blockchain Platforms
- Multi-Chain Smart Contract Systems
- Fintech, Payments & Tokenized Assets
- Crypto Trading, Bots & Marketplaces
- Gaming & Utility Token Ecosystems
- KYC-Gated & Compliance-Aware Platforms
- Event-Driven & Real-Time Systems
- Secure API & Orchestrated Backend Services

TECHNOLOGY FOCUS

- Multi-Chain Blockchain Architecture
- EVM & Non-EVM System Design
- Smart Contract Design & Tokenomics
- Presale, Vesting & Marketplace Logic
- Backend Orchestration & Infra

SYSTEM OWNERSHIP

- End-to-End System Architecture
- Production Deployment & Operations
- Security, Access Control & Key Management
- Scalability, Performance & Fault Isolation
- Data Integrity & Consistency Guarantees
- Inter-Service Communication Design
- Failure Recovery & Monitoring Strategies
- Client-Facing Technical Leadership

DELIVERY & COLLABORATION

- Requirement Analysis & System Scoping
- Architecture Reviews & Trade-Off Decisions
- API Contract Design
- Cross-Functional Team Collaboration
- Client & Stakeholder Communication

EDUCATION

[Bachelor of Science - Electronics](#)
Pune University
